A new Technology companies that interest me, and that i use alot of their products are NVIDIA, AMD, and Microsoft.

Doing some research on NVIDIA, their stack includes
-JQuery
-JQuery UI
-Modernizr
-Handlebars.js
-Mustache
-edgeCast
-Transloadit

The only one i have heard of above is JQuery and Mustache, but after looking into them i learned that Handlebars.js is javascript library used to create re-usable webpage templates! I though that was pretty cool because we did some design yesterday

Amd uses…
=JavaScript
-JQuery
-Python
-NGINX
-Bootstrap
-C++
-Objective C
-Shell
-C
-Pearl (Which is weird because their logo is an Onion and thats what Tor browser uses (To access dark web)
-Lua
And MATLAB

This is a much more familiar stack to me. Pretty wild to see a company like AMD using javascript and Python!

Apple uses a muuuuch smaller tech stack than i imagined!
--Swift (which i learned is primarily for IOS development)
-Objective C
-cocoa touch (iOS_
And Cocoa (OSx
